1 Introduction

HillMaster-SRV is a member of HillMaster-ERP business software that is used for managing garage (Workshop) operations of a business organization. It can be used with other HillMaster-ERP modules in an integrated scenario. Specifically, the HillMaster-POS accredited by ERCA is used in a fully integrated environment with the HillMaster-SRV.

Recommended System requirements for Server

- Processor: Intel® Xeon® processor E5-2600 v4 product family
- Operating System: Microsoft® Windows Server® 2008 R2 and above
- Availability: ECC memory, Hot-plug hard drives, Hot-plug redundant cooling, Hot-plug redundant power, iDRAC8, Internal Dual SD Module, Single Device Data Correction (SDDC) Spare Rank, Tool-less chassis, Support for high availability clustering and virtualization Proactive systems management alerts, iDRAC8 with Lifecycle Controller
- Chipset: Intel C610 series chipset
- Communications: Dual-port 1GB NIC
- Drive Bays: Internal hard drive bay and hot-plug backplane: Up to 8 x 3.5" **HDD**: SAS, SATA, Near-line SAS **SSD**: SAS, SATA
- Embedded Hypervisor (Optional)
- Optional supported hypervisors: Microsoft® Windows Server® 2012, with Hyper-V® Citrix® XenServer® VMware® vSphere® ESXi™
- Memory: 32GB
- Network Controller: 2 x 1Gb
- RAID Controllers: Internal: PERC S130, ERC H330, PERC H730, PERC H730P ;
- Storage: 4 x 500GB Hot Plug SAS Hard Drives;

Recommended System requirements for Workstations

- Operating system: Windows 10 Pro 64
- Processor family: 8th Generation Intel® Core™ i7 processor
- Processor: Intel® Core™ i7 8700K with Intel® UHD Graphics 630
- Number of processors: 1
- Memory: 8 GB
- Memory Slots: 4 DIMM
- Storage: Internal drive bays - Two 3.5"; Two M.2 NVME 2280 SSD
- External drive bays: Two 5.25"

- Internal drive: 256 GB SATA SSD
- Additional storage: HP SD 4 Media Card Reader
- Storage controller: Integrated SATA
- Optical drive: HP Slim DVD-Writer
- Display and Graphics: Integrated
- Compatible displays: 17" Flat Screen
- Communications: LAN Integrated Intel® I219-LM PCIe® GbE
- Audio: Internal mono speaker
- Bundles: Keyboard, USB Optical Mouse

UPS

- Uninterruptable Power Suply Unit for Server 2.2KVA

Laserjet Printer:

- Minimum of one Laserjet printer for each site location

2 Getting Started

The installation of the application should be performed by a trained system administrator or HillMark Ethiopia. All HillMaster-ERP modules installed on the server for a client uses one login. After login with valid user name and password, the user can then select the specific module determined by the access privilege granted to him or her.

After login, the user should:

- Click on the “Application” and all the HillMaster-ERP modules installed will be listed;
- The user gets the following page showing the list of installed modules;
- Click on the “Service Master 4.1” for HillMaster-SRV;

Clicking on "Service Master 4.1" should render the following Main Menu lists

A main menu component may give sub menus and you should click on the component that is relevant for your operation.

3 File Menu

The file menu contains three sub menu components for setting up company information, General Ledger account numbers and garage estimation letter setups.

3.1 Company Setup

The company setup page contains different tabs. Some of the data values are automatically pulled from the System Administration module and will not allow you to change them within this module. The different tabs should be filled with relevant values for the system to properly behave when performing operations that use these values.

Among important parameters for garage service business are the following since they are required for opening job order cards:

Repair / Service type:	This setup is performed within the Maintenance menu of this system. Each service type should be created with identifying Id, description, rate applicable if supplied by your company, rate applied if supplied by other company, and the likes.
Garage invoice types:	Garage invoice types are created in the global parameter setup contained in the maintenance menu. This includes Cash, Credit or Internal units.
Vehicle Make-in:	Vehicle make-in data is created in the global parameter setup contained in the maintenance menu. When you open a new job, this data is available as a selection. If not created first it will not appear in the selection list and should be created first to open the job card. This includes Cash, Credit or Internal units.

4.3 Job Order

New job orders are opened from this page. The page has different tabs for maintaining general information, other information, repair details, informing client, job text and audit log for each job that is created on the system. Click on the proper tab and record the data required in the appropriate fields. The general info tab and job text/charge tab must be filled for any new job.

Note: Opening of Job Order for vehicle plate numbers or customers included in the blocked list is not possible. It should be first released from the block list.

General information tab:

This page is used for maintaining general information for the job opened. To open new Job order do the following:

- Click on "Refresh" to clear data fields;
- Click on "New" and the system will assign a new Job order number;
- Chassis number: Type in the Chassis number of the vehicle.
- Plate number: Type in the plate number of the vehicle.
- Repair/Service type: Select the repair or service type from the selection list. These repair or service types should be maintained in to the system to be listed here.
- Invoice type: Select if the payment for the job is to be made in cash or on credit.
- Sub ledger: If the invoice type is "Credit" the customer name and sub ledger should be selected from the list. It is not required if invoice type is cash.
- Customer: If the invoice type is "Credit" the customer name and sub ledger should be selected from the list. It is not required if invoice type is cash.
- Address: Type customer address
- Model/Serial number: Type in the model number of the vehicle.
- FR Date:
- Make: Type the make of the Vehicle
- Engine Number: Type in the Engine number of the vehicle.
- Millage in KM: Type in the Kilometer reading
- Opening date: Type in the opening date. The system will automatically take current date if not selected.
- Expected finish date: Type in the expected finish date. The system will automatically take current date if not selected.
- Model type: Choose from the selection list of available model types. If new, it should be created first.

COA: COA Name:

Category:

Customer Type:

☒ Allow Credit ☐ On Hold ☐ Delear

Customers are created in the general ledger module and pulled to the service module. This page is used only if the HillMaster-COGL is not implemented.

- Click on the "Refresh" button to clear data from the fields;
- Click on "New" to create a new customer;
- Fill the fields in the general information section with relevant data as follows:
- Sub ledger number: type the sub ledger number applicable to this customer in the COA;
- TIN: type the customer TIN number, should be 10 or 13 digits;
- Customer name: Name of the customer;
- Contact: type the name of contact person in the company;
- Address: fill the address fields with relevant data;
- Price list: Select the price type that is used for the created customer;

The bottom part of the page is where you setup the GL account numbers and other data for this customer:

The screenshot shows a web form for customer setup. At the top, there are four tabs: 'GL', 'Other', 'Local Address', and 'Foreign Address'. The 'GL' tab is selected. Below the tabs, there are several input fields: 'COA' (a text box), 'COA Name' (a text box), 'Category' (a dropdown menu with 'individual' selected), and 'Customer Type' (a dropdown menu). To the right of these fields are three checkboxes: 'Allow Credit' (unchecked), 'On Hold' (checked), and 'Delear' (unchecked).

- GL Tab: Setup account numbers in the COA for this customer including customer type and whether credit is allowed or not.
- Other info tab: Specify the specific address details for the customer created
- Local Address: For customer based in Ethiopia
- Foreign address: If the customer is based outside of Ethiopia

4.5 Plate number maintenance

This page is used to record vehicles that belong to the company. These vehicles are treated as internal owned by the company for which standard invoices may not be printed like that of external customers and treatment of costs of spare parts issued to jobs and labor costs for internal vehicles can be different.

- Click on "Add New" record;

4.7 Labor types

This page has two parts. The first part is used to maintain the different labor types also called Operation Codes with relevant details.

Home **Labour Rate Maintenance**

New Save Print Preview Finish Delete Refresh View Log Ready

Labour Code: CB-018 Taxable Section: Cargo Body

Description: ASSEMBLING OF FRONT BOARDS WITH ITS EXTENSIONS

Allowed For: Cargo Body Manufacturing Rate/Hour: 1.0000 In Active

Sub Category: Assembly Price List Type:

New Add Delete Refresh Add For All Model Group

Model Group Type	Hours Required	Charge Amount	MFC Hrs	Job Comp. Hrs
Iveco Trakker CB (84)	6.00	6.00	0.00	0.00

- Labor code: Assign a code to the labor type or operation code you create;
- Taxable: Tick the check box if the labor type is subject to VAT tax;
- Select the section to which this labor type is applicable or used;
- Description: Type description for the created labor code;
- Allowed for: Select the operation for which this labor type can be applied;
- Sub category: Select the sub category of the labor type created;
- Rate/Hour: Specify the per hour rate for charging to jobs;

The second part is where you assign the labor code to the different model groups maintained in the system already.

New Add Delete Refresh Add For All Model Group

Model Group Type	Hours Required	Charge Amount	MFC Hrs	Job Comp. Hrs
84 (Iveco Trakker CB)	6.00	6.000000	0.00	0.00

Model Group	Std. Hours	Charge Amt	MFC Hour	Comp. Hour
Iveco Trakker CB (84)	6.00	6.00	0.00	0.00

- You can select the Model group from the selection list and then specify the Hours required which will be used for billing the job and then click on "Add" button;
- If this labor code is applicable to model groups, then specify the hours required and then click on "Add for all model group" button;

4.8 Other charges setup

This page is used for creating charges that may be treated as other charges.

- Click on "New"
- Assign Charge Code for the charge type to be created;
- Tick if it is taxable. Normally all charge types are taxable;

Charge Code	Description	UM	Unit Price	Unit Cost	Taxable	Sub Category
OC001	Car wash	Ea	50.00	0.00	☒	Body Work

- Specify the Job type for which this charge type is applicable;
- Type the description for the charge type for the created charge code;
- Select the section that is relevant for this charge type if specified;
- Specify the unit of measure, unit price and unit costs for the created charge type;
- Select the sub category applicable for this charge code;
- Click on "Save" button when you are done and the charge code you created will appear in the grid.

4.9 Fuel & lubricants

This page is used for creating fuel and lubricants that may be used for the job during maintenance operation in terms of code and description with associated unit price and unit cost.

Charge Code	Description	UM	Unit Price	Unit Cost	Taxable	Sub Category	Section
FL001	Regular Fuel	Lt	21.00	21.00	☒	Body Work	NS
FL002	Deseil fuel	Lt	20.00	20.00	☐	Body Work	NS

- Click on "Refresh" button
- Click on "New" button;
- Assign a code to the fuel; or lubricant item you want to create;
- Tick in the check box if it taxable item;
- Select the section to which this code may be applicable;

- Type the description of the lubricant or fuel you are creating;
- Specify the unit of measure;
- Specify the unit price per unit of measure specified;
- Specify the unit cost per unit of measure specified;
- Save your entry and the item created will be added to the grid;

4.10 Miscellaneous charge types

This page is used for creating the different miscellaneous charge types used for the maintenance operation in terms of code and description with associated unit price and unit cost.

Home | Other Charge Type Maintenance | Fuel and Lubricant Maintenance | **Miscellaneous Charge Type Maintenance**

New Save Delete Print Preview Refresh View Log Ready

Misc. Charge Code: MC001 Taxable Used For/Job Type: All

Description: Wheel balancing Section: NS

- Assign a code to the sublet work type you want to create;
- Tick in the check box if it taxable item;
- Select the job type to which this code may be applicable;
- Select the section applicable to this charge code;
- Type the description of the sublet work type identified by the code you are creating;
- Specify the unit of measure;
- Specify the unit price per unit of measure specified;
- Specify the unit cost per unit of measure specified;
- Select the sub category to which this charge type is applicable;
- Select the sublet work supplier providing the created sublet work type;
- Save your entry and the item created will be added to the grid;

4.12 Consumable charges setup

This page is used to setup charge codes for consumables that are not treated by parts issue to job. Some business's also call it "Small Materials (SM)". It is calculated as specified percentage of the total non-parts value applied to a job. The percentage is assumed to decline as the total non-parts value grows. We setup this charge code here either to apply to all jobs or only to selected job categories.

- The different job types like repair or service in a service department of a garage in terms of ID and Description (job type description) in the first two columns of the grid. The top row shows the rates to be applied as follows:
 - Default per hour rate for vehicles supplied by your company where there is no price lists defined;
 - Default per hour rate for vehicles supplied by others;
 - Item codes of general consumable items (small materials used in every operation of the selected job type using one charge code) These could be different by job type or could also be the same or one charge code for all job types;
 - The per hour unit cost of labor charges normally used for posting WIP for labor charges;
 - The department to which the specified job type of the garage belongs to;

- The Starting station (S/Station); Ending station (E/Station) and Transfer allowed fields are applicable only to an assembly line operation which doesn't apply to purely garage service operation;
- Take from third party field is used to specify if the labor rate (flat rate) is to be taken from manufacturer's supplied sources where it is compatible with current version of HillMaster-SRV;

Charge category tab:

This tab is used for defining price discounts for each charge type category. There are five charge type categories available on the system as a default setting as listed in the page.

Labor price list tab:

To setup price list:

- Click on "Add New" button and the system will give you interface window where you specify price list id, description and rate per hour;
-

Home Job Type Per Hour Rate Setup				
Add New Record Delete Record Print Preview View				
Rate Per Hour Charge Category Labour Price List				
No	PL Id	Description	Rate/Hour	Created By
▶ 1	1	Service price	150.00000	administrator
2	2	Repair price list	200.00000	administrator

The price setup in this page will over ride the default price. To enable this feature "Take labor rate from price list" in the name value parameter setup should be set to yes.

Note: If you are using the labor price list setup here, the rate will be the same for vehicles supplied by your company and supplied by others.

5 Enquiry Menu

The enquiry menu is used to retrieve any information on the jobs that have been accepted for action. There are sub menus, which are used for information retrieval organized logically.

In this menu there are several sub menu tasks that can be accessed by a user that have valid access privilege. Each sub menu will give a page where, you can enquire in to the summary or details of a transaction, or job, based on entering a locator in the appropriate data field or using criteria. The details of how to use for each page is purposely omitted from this manual as it is a straight forward activity.

6 Transaction

This page is used to process all types of transactions of garage activities like issuance of items, entry of labor transactions, miscellaneous entries, lubricants entries, local purchase entries and item reserve entries and other tasks as shown below.

6.1 Item issue

Item issue can be performed for active job order numbers created on the system.

- Click on "Refresh" to clear any data from the fields;
- Click on "Add New" and the system will automatically assign issue number if it is set to be generated automatically by the system. Otherwise, the user should specify the issue number from the preprinted document being used.
- Select the sales person that is processing the item issue for this job;
- Select the job order number to which the cost of the item to be issued is going to be charged.

Note: The job order number should exist in the selection list and must also be clocked-in for a technician. Otherwise, the system will either give a warning message before finalizing issue or totally block issue to jobs that have not been clocked-in for technician.

- Select the requisition number from the selection if the parts to be issued is based on a requisition;
- Customer name and address data supplied by the customer when job is opened will be displayed here. If there is errors on the address data corrections should be made on the job card details;

No	Store	Item Code	Description	Quantity	Unit Price	Amount	VAT	Total Inc VAT
1	HO	P01	Fuel Filter	1.00	2.50	2.50	0.38	2.88

- Select the store from where to fulfill the requested item issue;
- Select the item to issue and quantity to issue. The system will show available quantities of that item on the selected store. If it is "0" it means you should select another store or transfer the item from another store to your store before processing the issue.
- Save your entry and repeat the procedure if you are issuing more items;
- If you finish recording all the items for this job order, then click on "Finish Issue Voucher"
- The system will print a Garage Issue Voucher for the transaction processed.

6.2 Item issue from reserve

Processing this transaction requires prior recording of item reserved either for a job or customer on the HillMaster-COSS module. If there is no reserve transaction, the system will give you a message.

To process garage issue from reserve:

- Click on "Refresh"
- Click on "Add New"
- Select the sales person
- System will automatically generate issue voucher number;
- Select Job card number. The relevant details for the job card will appear in the fields;
- Click on "Reserve" tab at the bottom and the list of part numbers reserved for this job order are listed,
- Copy the item code of the part number you want to issue and past it in the Item code field of the interface;
- Click on "Save Record"
- Repeat the procedure if you want to issue more item numbers from the reserve for this job;
- Finally, click on "Finish Issue Voucher" and the system will print the issue voucher for you;

Reserve No	Job Order No	Date	Store Code	Item Code	Created By	Description	Created Dt	Reserved	Created WS	Arrived	Supplied
RZ-00001-19	J-00068-19	02/09/2019	HO	P01	administrator	Fuel Filter	02/09/2019	1.00	USER-PC	1.00	1.00

- The grid shows items reserved, items arrived and items supplied from reserve;

6.3 Garage issue requisition

Garage issue requires recording and approval of issue requisition first. To record issue requisitions:

- Click on "Refresh"
- Click on "Add New" the system will automatically assign requisition number and pick current date as requisition date;
- Select Job card number.
- Select the item code that you are requesting for this job;
- Specify the quantity to request;
- Specify any remark you may want to make for the item requested;
- Click on "Save" button;
- Repeat the procedure if you are requesting more items for this job order;

- Finally, tick in the "Finalized" check box and click "Finish". The system will print the issue requisition voucher for you;

6.4 Labor charge entry

This page is used for recording the labor used by charge type for jobs that have been worked on by a technician. If there are no technicians clocked-in for this job, you will not be able to record the charge types.

- Click on "Refresh" to clear the fields;
- Click on "Add New";
- Select the job order number for which you are recording labor charges. The service to be charged must have been completed and the technician clocked-out for recording the labor charge;
- Select the order number and the details of the order will be populated in some of the fields;
- Select the charge code of the labor charge to be recorded and it will appear in the right side window of the screen;

7.10 Job Estimation

This page is used for processing garage job estimations for various reasons (External estimation, Insurance claim estimation, internal estimation or Template estimation). The page provides different tabs for maintaining "general information"; "Parts"; "Labor"; "Fuel & Lubes"; "Miscellaneous charges"; "Sublet charges" and "Other charges"

- Click on "Refresh" button to clear data fields from previous data;
- Click on "Add New" and the system will automatically assign estimation number and update estimation date and the general information tab will be active by default;
- Complete all the fields in the general information tab with relevant data. The chassis number and plate number can be browsed for existing data or type value if new;
- Click on "Save" button to save your entry for the general information tab before starting data capture for the other tabs;
- Open any relevant tab for the estimation;

- Within each tab start by clicking on the "Refresh" button in the tab;
- Click on "Add New" button in the selected tab;
- Select the item, labor, fuel & lube ... etc and then click on the "Add" button in the selected tab for item you add;

8.11 Journal listing

This page is used to generate listing of journals using your criteria: reference number range, journal type and period. There are also radio buttons that can be used to further filter your listing.

The screenshot shows the 'Journalized Entry Listing' interface. At the top, there's a navigation bar with 'Home' and 'Journalized Entry Listing' tabs. Below this, there are buttons for 'Print Preview', 'Refresh', and a 'Ready' status indicator. The main content area is divided into several sections for filtering and input. The 'Selection By' section has three radio buttons: 'Reference No.' (selected), 'Period', and 'By Date'. The 'JV Format' section has two radio buttons: 'Yes' (selected) and 'No'. The 'Show Type' section has three radio buttons: 'All', 'Un Posted To GL' (selected), and 'Posted To GL'. The 'Details' section has two radio buttons: 'Yes' (selected) and 'No'. Below these sections are several input fields: 'Starting Ref No.' with a dropdown menu showing 'CSS-12-000013', 'Ending Ref No.' with a dropdown menu showing 'H19100045', 'Journal Type:' with a dropdown menu showing 'CGS', 'Period:' with a dropdown menu showing 'April - 2019', 'Journal No.' with a text input field, and 'Narration:' with a larger text input field.

- Tick the radio buttons based on your filtration requirement;
- Specify the reference range with starting and ending reference number from the selection list;
- Specify the journal type and the period for which you are listing the journals;
- You can give journal number and any narration in the fields provided;
- When you are done, click on the "Print preview" and the system will generate the journal listing based on the selections you made.

8.12 Posting journals to GL

Posting of garage sales journals is to be performed from the HillMark-COSS module side

8.13 Calculator

This page activates a standard calculator that you may use for computing some numerical values while you are processing input or output transactions.

9 Setup

This menu is used to maintain different parameters that are helpful for effectively performing different tasks.

9.1 Application parameter for estimations

This page is used for setting up standard terms and conditions that should appear on every garage estimations. System will display standard values that has been setup already. You can change these values by clicking on "New" and then write the new value for the parameter and save it.

- **Advance payment percentage:** The percentage of advance payment for the work estimated if it has to be converted to order;
- **Advance payment if exceeds:** The minimum order amount beyond which advance payment is mandatory;
- **Advance required with-in:** The number of days in which the advance payment should be made after placing the order. Work on the order normally starts after the advance payment is received;
- **Parking fee per day:** The amount to be charged as a parking fee per day while the vehicle is in the garage;
- **Parking fee will start from:** When will the parking fee start counting. Normally after the completion and notice is served to the customer about the completion of job;

Depending on the working hour setup, the system will calculate effective working hours available per day.

9.3 Working calendar setup

This page is used for setting up working calendar for the year as applicable to the entire garage operation. The days on which the garage is not working including weekends and public Holydays are marked by click on the date of the month. The day will turn red on the calendar.

Home **Working Calander Setup**

Refresh Calculate Working Hour - Month Calculate Working Hour - Year Ready

Fiscal Year: 2019 Month: September

September 2019						
Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28
29	30					

ToDay: 16/09/2019 Effective Working Hours: 157.500

- As you select a month of a year and update the days as non-working, the system will calculate and update the effective working hours for the period accordingly. Associated productivity reports will also use this data setup here.
- Select the year and month for which you are updating working day;
- Right click on the day of the month that you are setting as working or non-working. The system will set the day as non-working if it was initially working day or set it to working if it was initially non-working day;
- Continue the procedure until you setup for the entire year;
- Click on "Calculate working hours – Month" or "Calculate working hour – year" and the system will update the effective working hours for the month and year. Note: you can see the updated working hours after you exist from the page and reload the page.

9.4 Workgroup setup

This page provides two tabs. The first tab is used for setup of a segmentation of operation by department, section and unit. While the second tab is used for creating different stations normally used for assembly line operation.

9.5 Technician setup

This page is used to create technicians by the departments or units they belong to and whether they are active, on payroll, to whom they report. It also has a field for recording date of employment and date of termination which would be used for calculation of productivity and efficiency reports of technicians. This data may be pulled automatically for companies that are using HillMaster-HRM (Human Resource Management module).

10 Tasks

10.1 Absent Entry

This page is used for recording absent time or over time worked by technician in terms of date, hours and reason. Jobs can't be clocked-in for the technicians when they are on absence as recorded on the system. The page provides two tabs "Absence" and "Over time". Select the appropriate tab before recording data. To do this:

Absence tab:

1. Click on "Refresh" button to clear all the fields;
2. Click on "Add New" to create a new record;
3. Specify the date;
4. Select the technician from the list;
5. Select the absence type from the list;
6. Specify the absence hour. It should be a maximum of 7 hours for a day;
7. Click on "Save record" button;

No	Date	Tech Code	Technician Name	Absent Type	Absent Hour	Cre
1	03/09/2019	001	Shimelis Bekele	Annual Leave	7.00	adm

The procedure is the same for recording over time worked by technician.

10.2 Dispatch Job to Section

Job orders opened should be dispatched to the different sections before work begins on the job. Clock-in job to technicians is not possible unless the job is first dispatched. To do this:

1. Click on "Refresh" to clear all the fields for fresh entry;
2. Click on "Add New" button;
3. Select the job order number to dispatch to sections setup on the system. The job order details will appear in the appropriate fields;
4. Select the section to dispatch to. Normally if the job is opened for specified section, it will appear as a single selection. However, if the job is setup to be worked on in different sections, these sections will appear in the selection list and you should select to which section the job should be dispatched first;
5. The dispatch date and time will automatically be filled by the system as current time.

6. Specify any remarks if any in the provided field and then
7. Click on the "Save" button before you finish;

Note: Only jobs dispatched to sections can be clocked-in for a technician.

10.3 Receive Dispatched Job

This page is used for recording the receiving of job orders by the designated section of the garage service. Jobs received in the section can then be clocked-in for technician by the section foreman. Finally, when the job is completed, it has to be received from sections in order to be able to close the job. To do this:

1. Click on "Refresh" to clear the data in the fields;
2. Select the job order number to be received by the section. All the relevant data maintained for the job will appear in the appropriate fields;
3. Specify the Vehicle location, where it is parked so that it can be easily located by the technician when job is clocked-in;
4. Click on the "Received dispatched Job" button to record receipt;

10.4 Job Clock In

This page is used for clocking-in job for a technician. Note that only jobs that have been opened, then dispatched to sections and received by the section can be clock-in for a technician.

To do this:

1. Click on "Refresh" to clear the data in the fields;
2. Click on "Add New";
3. Select the job order number to Clock-in for a technician. All the relevant data maintained for the job will appear in the appropriate fields;
4. Select the technician to assign for this job order. List of technicians in this section will appear in the selection list;
5. Write any remark in the field provided;
6. Select the task that the technician is going to perform on this job. All the job texts (Charge types) specified for this job order by the customer when the job was opened will appear in the selection list. If new tasks (charge types) are discovered in the process, it should be communicated to the customer and then added to the job text of the job order. You can't assign the same technician if he is already clocked-in for another job at the same time since it is practically impossible. If needed, he should be clocked-out from the first job;
7. Click on the "Save" button;

This page lists all the custom reports that have been setup. You can double click on the report type and can generate the custom report. Other custom reports can be setup by assigning report name and then assigning data fields that should be used for the desired report and saving it on the system.

- Select the report type;
- Click on "Show report"

11.6 User defined reports

This page list any user defined reports if any so that you can generate the report as needed. You can also define your own reports using the data fields available on the database.

The screenshot shows a web application interface for managing reports. At the top, there are tabs for 'Home' and 'Custom Report', with 'Custom Report' being the active tab. Below the tabs, there are three links: 'Show Report' (with a magnifying glass icon), 'Refresh' (with a circular arrow icon), and 'User Defined Report' (in blue text). A 'Saved Reports' tab is also visible. Below this, there is a search section with a text input field containing 'Enter text to search...', a 'Find' button, and a 'Clear' button. To the right of the search section, there is a table with three columns: 'Filed/Column Name', 'Filter From', and 'Filter To'. Below the search section, there is a table with three columns: 'Id', 'Report Name', and 'Report Header'. The table is currently empty.

Id	Report Name	Report Header
